This is simple pokeball toy for cats. You fill it up with the treats through the hole. As your cat rolls the ball the treats will fall out of it rewarding the cat. The model consists of 4 parts: two hemispheres, preferably one red and one white, white ring, and black middle part. You don't have to glue, the parts together, they fit together quite well, but you can, if you want to. The toy works well with treats up to 9 mm diameter. You may notice that filling it up with treats one by one may be annoying and so to make our lives easier I also provided model of simple funnel, that fits onto the white ring and helps you fill up the pokeball.
